

# ENVISIONING THE FUTURE

Macular degeneration.  
Glaucoma.  
Retinitis pigmentosa.

Every day, researchers at the U-M W.K. Kellogg Eye Center seek answers to questions that will improve our understanding — and our ability to treat and cure — debilitating disorders and diseases of the eye. And every day, you can work right alongside these world-class researchers by supporting their quest for scientific information that will enable future eye care solutions. Support groundbreaking research at Kellogg and help make the Michigan Difference in vision.

Contact the Kellogg Eye Center at (734) 763-1011; go to [www.medicineatmichigan.org/gifts](http://www.medicineatmichigan.org/gifts) or use the envelope provided with this issue of *Medicine at Michigan*.

## CHILD AND FAMILY LIFE

A SERIOUSLY ILL CHILD CREATES A CHALLENGING AND HEART-WRENCHING EXPERIENCE FOR THE ENTIRE FAMILY.

At C.S. Mott Children's Hospital, the Child and Family Life Program helps reduce the psychological, social and emotional burden of serious illness that affects the well-being of young patients and their families. Child and Family Life provides opportunities for coping, growth and development, while focusing on the value of play and relationships to the healing process.

To support this crucial component of children's care at Mott — and that of their families — call (734) 998-6069, go to [www.medicineatmichigan.org/gifts](http://www.medicineatmichigan.org/gifts) or use the envelope provided with this issue of *Medicine at Michigan*.
