

KYUNG J. CHO, M.D. (Fellowship 1975), the William Martel Collegiate Professor of Radiology, received a Gold Medal from the Society of Interventional Radiology in recognition of his clinical work, research, contributions to the literature, and education of residents, fellows, radiologists and referring physicians.

N. REED DUNNICK, M.D., the Fred Jenner Hodges Professor of Radiology and chair of the Department of Radiology, received the Association of University Radiologists' Gold Medal in recognition of his contributions to the field as a clinician, scientist, mentor and leader.

KIM EAGLE, M.D., received the American College of Cardiology's 2012 Distinguished Teacher Award. The award is given to a fellow of the college who demonstrates innovative and outstanding teaching characteristics and compassion, and who uses those attributes to contribute to the field of cardiovascular medicine. Eagle is the Albion Walter Hewlett Professor of Internal Medicine and a director of the U-M Cardiovascular Center.

JAMES B. FROEHLICH, M.D., M.P.H. (Fellowship 1996), is president-elect of the Society for Vascular Medicine. He serves as associate professor of internal medicine and director of the Vascular Medicine Program and the Anticoagulation Service.

JOHN F. GREDEN, M.D., executive director of the U-M Comprehensive Depression Center and founder and chair of the National Network of Depression Centers, was named board president of the American Foundation for Suicide Prevention. He also is the 2012 recipient of the Gerald R. Klerman Senior Investigator Award from the Depression and Bipolar Support Alliance. Greden is the Rachel Upjohn Professor of Psychiatry and Clinical Neurosciences and a research professor in the Molecular and Behavioral Neuroscience Institute.

CARMEN R. GREEN, M.D. (Residency 1992), professor of anesthesiology and of obstetrics and gynecology, was recently appointed to three national committees. In the fall she joined the NIH advisory board for the National Center for Medical Rehabilitation Re-

search, which advises the directors of NIH, NCMRR and the National Institute of Child Health and Human Development on matters and policies relating to the center's programs. In March, Green became a member of the U.S. Secretary of Health and Human Services' Interagency Pain Research Coordinating Committee of the NIH, as well as the American Cancer Society's Council for Extramural Grants.

DAVID D. HOWELL JR. (M.D. 1983) was one of 12 radiation oncologists in the U.S. to be inducted as fellows in the American College of Radiology in April. Howell is an assistant professor of radiation oncology, and a member of the staff of the VA Ann Arbor Health-care System.

TIMOTHY R.B. JOHNSON, M.D. (Residency 1979), the Bates Professor of the Diseases of Women and Children and chair of the Department of Obstetrics and Gynecology, received the Lifetime Achievement Award from the Association of Professors of Gynecology and Obstetrics. The award is given to leaders who make noteworthy contributions within the specialty and

Faculty Profile] Sabine Hildebrandt: Teaching and the Third Reich

“IF YOU AREN’T PASSIONATE ABOUT SOMETHING, I think you have no business being a teacher at an academic institution,” says Sabine Hildebrandt, M.D., a lecturer in the Medical School Division of Anatomical Sciences. “And the students notice. If you’re not passionate, they won’t listen to you.”

Hildebrandt is clearly passionate, about both teaching and her subject matter, and her students listen when she depicts the relationship that existed in her native Germany between the study of anatomy and Hitler’s Third Reich, which was only too able and willing to provide cadavers to scholars and teachers in the field — provided they met the regime’s criteria for “racial” and political acceptability.

“I find a good reception from students,” she says. “The history of National Socialism still holds great interest because it is so vivid, and many students are surprised that anatomy was a part of it. It wasn’t talked about until the last two decades. Basically, what it took was for all the involved anatomists and their pupils to die before anyone was willing to touch the subject.”

After an early career in experimental rheumatology, Hildebrandt discovered her calling: teaching. “That is my true passion,” she says. “And I’m able to combine that with my interest for the history of the Third Reich. I was born only 13 years after the end of World War II, in a society with vivid memories of that war and conscious of its guilt. I needed to know how all of this could have happened, and anatomy was my subject.”

Hildebrandt has identified two classes of victims: the anatomists themselves, and those whose remains were furnished for dissection. If they were lucky, anatomists identified as Jewish under Nazi law or who refused to cooperate with the government merely lost their jobs, but some lost their lives. Many, especially younger scientists, fled the country.

Researching the anatomists has been far easier than tracking down information about the individuals who were dissected. Records are incomplete, and people were executed for everything from murder to petty theft.

Hildebrandt is now a leader in a growing movement in medical historiography. She served as co-guest editor of a recently published special issue of *Annals of Anatomy*, devoted to a symposium on anatomy in the Third Reich held in Würzburg, Germany.

In recent years, “the whole area has just exploded,” she says. “Only in May, the German Medical Association came out with the first apology for physicians’ involvement in the deeds of the Third Reich.”

For Hildebrandt, such an outcome demonstrates the value of the exploration and teaching of history. “The continuity between the past and the now is very important to me,” she says. “Are scientists acquiescing to the regime if they use the materials supplied by the regime, or identify with the regime? I would say yes. It’s similar to physicians taking part in executions in this country. I can’t think of anything more wrong. A doctor is supposed to heal.” —JEFF MORTIMER

work to further the goals of the association and academic medicine.

CHERYL LEE, M.D., and **MONICA LYPSON**, M.D., have been selected as fellows in the Hedwig van Ameringen Executive Leadership in Academic Medicine Program for Women at Drexel University College of Medicine. The program prepares senior women faculty for positions of leadership at academic health centers and aims to increase the diversity of women in such positions. Lee is the Robert H. and Eva M. Moyad Research Professor of Urology and director of the Bladder Cancer Program. Lypson serves as associate professor of internal medicine and of medical education, and as assistant dean of graduate medical education.

RALPH LYDIC, Ph.D., the Bert N. LaDu Professor of Anesthesiology Research and professor of molecular and integrative physiology, will receive the 2012 Excellence in Research Award from the American Society of Anesthesiologists in October. The award recognizes Lydic's more than 30 years of research on the brain mechanisms

that regulate states of sleep and anesthesia, breathing and pain. Also, in May, Lydic was designated a distinguished alumnus by the Texas Tech University Graduate School of Biomedical Sciences, where he received his Ph.D. in 1979.

HOWARD MARKEL (M.D. 1986), Ph.D., the George E. Wantz Distinguished Professor of the History of Medicine and director of the Center for the History of Medicine, was elected to the American Epidemiological Society, the oldest body of its kind in the U.S. He also was appointed to membership on the Board of Population Health and Public Health Practice at the Institute of Medicine of the National Academies, a position which lasts through 2015. The board examines and develops strategies for disease prevention, addressing the science base for interventions, the public health infrastructure, and the education and supply of health professionals necessary for carrying them out.

MARCOS MONTAGNINI, M.D. (Fellowship 1998), associate professor of internal medicine in the Division of Ge-

riatric and Palliative Medicine, received the Spirit of the Planetree Physician Champion Award for 2012 for his work at the VA Ann Arbor Healthcare System. The awards were created to celebrate patient- and resident-centered care by recognizing individuals who personalize and demystify the health care experience for others.

RICK NEUBIG, M.D., Ph.D., was named president-elect of the American Society for Pharmacology and Experimental Therapeutics; he'll assume the presidency in July 2013. Neubig is a professor of pharmacology and associate professor of internal medicine, and one of the founders of the U-M Center for Chemical Genomics.

KEVIN TREMPER, M.D., Ph.D., received the J.S. Gravenstein Award for lifetime achievement for technology in anesthesia from the Society for Technology in Anesthesia. Tremper is the Robert B. Sweet Professor of Anesthesiology and chair of the Department of Anesthesiology. He currently is developing a new generation of alerting display system, AlertWatch, for use in operating rooms and intensive care units. —MF

**IN THE U.S.,
A MAN RECEIVES
A DIAGNOSIS OF
PROSTATE CANCER
EVERY 2.2 MINUTES,
AND ANOTHER DIES
FROM IT EVERY
15.6 MINUTES.**

World-renowned U-M researchers **Kenneth J. Pienta, M.D.**, and **Arul M. Chinnaiyan, M.D., Ph.D.**, are making important strides against this devastating disease, and you can help.

From now until December 31, 2013, every dollar given to support prostate cancer research at the U-M will be matched by the Prostate Cancer Foundation as part of a \$10 million challenge — doubling gifts and their impact.

Contribute today. Visit: www.giving.umich.edu/give/cancer-prostate-challenge
